

## **Environmental Policy**

***As a world leader, we take pride in knowing that our products help move millions of people and countless tons of cargo safely and securely, in the air and on the ground. Our restraint systems are in service 24 / 7 / 365 days a year on virtually every airline flying in the world today.***

***We at AmSafe continually review our activities and operations in order to identify our environmental effect and determine actions that can be taken in order to minimize our impact.***

***As part of our environmental mission we:***

- Constantly seek to improve our energy and resource consumption, minimise the amount of waste generated and minimise the use of harmful materials and generally prevent pollution.***
- Operate an Environmental Management Programme, the purpose of which is to promote continuous improvement to the environment through an internal audit and management review process.***
- Promote a high level of awareness of sustainability issues amongst our employees and have environmental management as a key element of our training programs.***
- Seek to meet or exceed all relevant legislative and regulatory requirements.***
- Ensure that goods and services as procured support our sustainable code of conduct. In turn, we encourage our suppliers and contractors to improve their own environmental performance.***
- Monitor progress against targets in order to reduce our ecological footprint.***
